

NEW:
Visibility Score
for the LineScanner:

Only show
the defects that
really matter!

NEW

Smart Defect Control

See What Matters!

- ▶ Human-like quality assessment now possible!
- ▶ Visibility Score: AI rates defects like the human eye
- ▶ The dial sets the display threshold
- ▶ Password protection
- ▶ **Focus on what really matters!**

Smart Defect Control

*Adjust sensitivity faster,
easier and more precisely —
directly at the LineScanner*

AI assigns a Visibility Score to every detected defect. With a single dial, the operator decides which defects are shown, from clearly visible defects to the finest irregularities.

One turn of the dial. See what matters!

Visibility Score – from defect detection to human perception!

Until now, setting up an inspection system to show only the truly relevant defects was a job for experts. **The LineScanner Visibility Score** evaluates how noticeable a defect is to the human eye by analyzing its size, contrast, position, and visual impact.

- ▶ The advanced AI **mimics human visual perception**
- ▶ Shows **only the relevant defects** to the operator
- ▶ Allows **"viewable at certain distance" tolerances**

Smart Defect Control

The Visibility Score calculates what the human eye can see. **Smart Defect Control** makes quality adjustment as easy as turning a single dial.

It has never been this easy to adjust the sensitivity of an inspection system:

- ▶ Relevant defects come first
- ▶ The **dial sets the display threshold**
- ▶ Improves consistency between inspectors, shifts and plants
- ▶ Focus on **what really matters!**
